

TOP 3 IDEAS

The main idea of the project is to help retailers track and manage stock related to their own products. There should be a two login if the user entered into the application (customer/retailers). In the customer login the customer requested their wanted item from their respected retailers if there is no stock in their respected retailers then alert mail is sent to retailers and customer can view the available items on their view. In the retailer's login the retailers are asked to update or add items on their stocks. The stocks will be updated after the successful purchase. This application will alert when there is a out of stock through messages or email then the customer will know while ordering if the requested materials is in stock or not.

The requirements from the shopkeeper to create backup inventory within limited time and in high accuracy makes us to come up with automation solution by using desktop. At this time we think that this is the based solution. However it might need some improvement in the future based on the lesson learned so is the new requirement from the shopkeeper

Through this application the retailers are know when there is out of stock through email the retailers are also alert when the stock is going to be finished soon. .Retail inventory management tools and methods give retailers more information on which to run their businesses. Applications have been developed to help retailers track and manage stocks related to their own products. The System will ask retailers to create their accounts by providing essential details.
